

Gypsum Rollers

Gypsum applications demand reliability, Luff delivers. Our idlers are designed for high-moisture environments and precise performance, helping your conveyors run cleaner, smoother, and longer.

Sealed for Life Bearings

All bearings come pre-greased and permanently sealed to lock out contaminants and extend roller life, even in dusty or damp conditions.

Ultra-Low Runout (TIR)

Precision manufacturing with a maximum TIR of just 0.020" (vs. 0.125" industry standard) means reduced vibration, better belt tracking, and less wear over time.

High Moisture Seal (Optional)

Combat harsh conditions with Luff's HMS technology, a grease-packed cavity behind the bearing shield ensures maximum moisture protection.
